Re: Springfield Bosk, Inc. Lot#2-Evergreen Avenue

Dear Mrs. Gershenfeld,

Enclosed please find all correspondence with reference to the new construction which is adjacent to my home. I had been in touch with Mr. Seidel who stated that he was taking action in this matter. It is now my understanding that Mr. Seidel has been hospitalized.

After reviewing the attached, I ask that:

1. The Certificate of Occupancy not be issued for the project until:
  - a. I am compensated \$337.80 paid to R. E. Coleman Associates, Inc. which confirms that the work done on Lot #2 (of land located on ground of former 61 Evergreen Avenue) is not per plans approved by the Township.
  - b. I be also compensated in lieu of damages sustained to date in the form of the installation of a sump pump in my basement with associated drainage.
  - c. That the contractor regrade and provide the associated drainage to the roof of the new dwelling and install a swale as required on the approved plan which will stop the ensuing damage.

Please also be advised that I have photographs which confirm all of the damage to date and believe this can be settled amicably without legal counsel.

Thank you for your understanding and quick response to my requests.

Sincerely,

*(Mrs.) Sophia Christodoulou*

Mrs. Sophia Christodoulou

Re: Construction-61 Evergreen Ave., Broomall, Pa.

Dear Mr. Flicker:

This is a follow-up to previous correspondence regarding water entry in my backyard and into my basement located at 55 Evergreen Avenue, Broomall, Pa. and damage sustained therefrom during torrential rains, escalating since construction was begun on the above-captioned location in June, 1989.

We have gone to quite an expense on four occasions (the latest being September 9, 1989) waterproofing and sealing the West wall facing the new construction both inside and outside to no avail when rains are heavy causing excessive water entry causing damage to stored items, water seeping under appliances, higher electric bills due to running of dehumidifier constantly day and night. This was experienced during the previous rainfalls between the onset of the job and the installation of the silt fence August 18, 1989 and bales of hay a few days later, which condition has not been experienced in that capacity in 24 years of residency. According to the National Weather Bureau report of rainfall between the period above mentioned was in excess of 12".

It may be mentioned at this time at the first meeting November 22, 1988, the residents of Lovell Avenue, let alone we as being adjacent to the captioned property, showed concern regarding water flow.

As evidenced by the photo submitted to you depicting the "clayey" water that had entered my basement that water had, has and will continue to enter my basement in view of the fact that either the Township did not set rules to prevent this occurrence which has escalated or the builder did not abide by same to safeguard our property. In other words, entry is from 61 Evergreen Ave.

It is needless to say, Mr. Flicker we are disappointed that you have not responded to the question posed to you, i.e; in essence, to whom do we turn to assuage this condition and, to reiterate, which has escalated during heavy rain, after the builder has completed construction and "packed up his bags and left"?

It seems that the seeding which is to follow will not correct this most serious condition in the basement as the silt fence and bales of hay seem to deter ground level conditions and not, so to speak "subterranean" as the basement is about three feet below where the fence, etc. is situated.

We believe this condition can be resolved amicably by the builder with the intervention of the Township so that we will not be confronted in the future with this water condition. Do you not agree?

Your prompt reply will be awaited with interest!

Respectfully submitted,

cc: Mr. John Longacre

Re: Water Drainage Problem  
W.O. #450-01

Dear Mrs. Christodoulou:

In response to your request, two visits were made to your home on September 28 and October 6, 1989 to review site conditions and obtain information regarding the water drainage problem. Information received from you and Pennoni Associates, Inc. included the following:

1. A blueprint of the "Plan of Property" for Springfield Bosk, Inc. showing the four (4) lot subdivision dated October 5, 1988.
2. The minutes of the Planning Commission special meeting held on January 31, 1989.
3. A letter dated January 27, 1989 from the Township Engineer to the Marple Township Planning Commission outlining engineering review comments.
4. Township of Marple Resolution No. 1493 approving the revised three (3) lot subdivision plan for Springfield Bosk, Inc. with outlined conditions for approval.
5. A letter dated September 5, 1989 from the Township Engineer to the Township Manager, Mr. Joseph Flicker, regarding the Township Engineer's investigation of the complaints expressed in your letters to the Township dated July 25, July 30, and August 16, 1989.

Based on our investigation, we have concluded the following:

1. A visual inspection of your property indicated water entering your basement through the west and north wall of the basement. In addition, it appears you have previously experienced water coming up through the floor of your basement in certain areas. You confirmed that this was an existing condition prior to construction of the subdivision.
2. The southeastern region of Pennsylvania has experienced above average rainfall this past spring and summer.

Re: Christodoulou Complaint  
61 Evergreen Avenue

Dear Mr. Flicker:

As requested by your office, we have undertaken to investigate the complaints of Mrs. Sophia Christodoulou as referenced by her letters dated July 25th and 30th, and August 16, 1989.

Referring to the above letters, Mrs. Christodoulou alludes to an unacceptable water condition which is occurring within her basement, and in areas of her backyard. She attributes these conditions to the site activities of the development.

On August 16, 1989, an on-site inspection was performed by a representative of this office, and Mr. Joseph Romano of the Township Code Enforcement Office. Certain discrepancies were noted concerning the placement of silt fence, and inquiries were made as to when finish grading and seeding was to occur. The developer was informed of our concerns and he indicated that he would resolve them.

The following day, we met with Mrs. Christodoulou to review the specific areas of her complaint. She admitted us to her cellar where several hairline cracks were observed in the cinder block wall. These cracks were at an approximate depth of six (6') feet below grade. These cracks did not appear recent as some discoloration of the surrounding wall had occurred. Mrs. Christodoulou commented that she has experienced recurring water problems in her basement over previous years, but that this year seemed to be the worst. It was explained that the rainfall for this region has exceeded the normal average and that ground saturation may be a contributing factor.

Observation of the west wall bordering the driveway indicated the mortar joint between the wall and driveway to be in good condition. No major cracks were observed. It would not appear that water seepage occurs along this boundary.

Our inspection revealed that the majority of the runoff which would impact on the area in question is actually generated by the impervious areas of the Christodoulou property itself. The driveway has a mild inverted crown which should serve to channel the flow into the rear of the property.

Concerning the development site, no indications were evident of any offsite sediment discharge. A small berm constructed along the property line appears to adequately direct flow to the development side of the property line.

During the course of subsequent site inspections, the silt fence was satisfactorily placed, hay bales were to be situated along the property line and final grading and seeding has been tentatively scheduled for September 5, 1989.

Accordingly, we have not found sufficient justification to correctly insinuate that the developer is at fault concerning the alleged intensification of the water problems occurring at the Christodoulou property.

We would further suggest that the problem is one which is recurring in nature, and has existed previously to the adjacent development activities.

However, it is realized that the Township must maintain the best interests of its residents. In an effort to determine such, the Christodoulous have indicated they would wish to see the hedgerow along the property line removed, and that they would favor the developer's installation of a sump pump to take care of the water problem.

The developer has stated that Mrs. Christodoulou must coordinate the hedge removal with the current owner of the 61 Evergreen property, and that it should not present a problem. As far as the pump installation is concerned, without adequate documentation to prove otherwise, we would recommend that a separate private arrangement be worked out between the homeowner and the developer, if it is so desired.

If we can be of further service in regard to the above, please advise.

Very truly yours,

PENNONI ASSOCIATES INC.

  
John J. Gillespie, P.E.  
Township Engineer

KDG/mcb

cc: Sophia Christodoulou  
Lee Gershenfeld, Director of Code Enforcement

3. Approval of the subdivision was based on providing positive drainage on the north and east side of Lot #2 in order to minimize or prevent added stormwater runoff onto your property.
4. After obtaining field information on October 6, 1989, it was evident that stormwater runoff onto your property has occurred from Lot #2 as no drainage swale was constructed at the northeastern corner of the new house on Lot #2. This is where most of the stormwater runoff occurs.
5. In our opinion, due to construction this past spring and summer, the above average rainfall and the additional runoff from roof and nonvegetated stripped areas which crossed onto your property aggravated the situation and contributed to additional water available to possibly find its way into your basement.

In conclusion, we would recommend that you notify the Township Manager and request a field meeting to insist on immediate construction of the drainage swale and installation of the spreader basin with associated piping from the roof drains on Lot #2 property as shown on the drawing. We would be happy to attend this meeting and hopefully help resolve this problem.

We would also recommend that you install a sump pump in your basement to discharge any groundwater which may continue to infiltrate your basement in the future.

If you have any questions, please do not hesitate to contact me.

Very truly yours,

R.E. COLEMAN ASSOCIATES, INC.

Re: 61 Evergreen Avenue / new construction  
Fourth Letter

Dear Mr. Flicker,

Please be advised that on August 16th, 1989 Mr. Ken D'Aurizio of Pennoni Associates, Inc. visited my premises and stated that:

1. he would make recommendations to the contractor and copy same to me.
2. my front exterior drainage system was not diverting the water properly.
3. that the pictures taken of my basement were of "colored" water and not of "muddy" water coming from the adjacent construction work.

Subsequently, Mr. D'Aurizio spoke to my son (Peter B. Christie) at which time he did not address:

1. the added burden of hydrostatic pressure being caused by the adjacent house's new construction on my basement's concrete slab.
2. the final disposition of water from the new house's foundation drainage system.
3. the finish swill and grading of the adjacent construction work.

When asked of my son, just what I wanted, my son suggested a sump pump with associated drainage at which Mr. D'Aurizio stated that "you can't make the contractor do that".

I note that on August 18th, 1989 a new silt fence was put up on the adjacent property running parallel to my basement and dirt was mounded next to the silt fence. Construction started around the 1st of June, 1989.

My question is now, when the houses are done including finish grading & seeding and the temporary silt fencing removed and the contractor gone, what happens when my basement and rear yard continues to flood?

Very truly yours,

Sophia Christodoulou

Re: New Construction - 61 Evergreen Avenue

Dear Mr. Flicker,

As a follow-up to my letters of July 30th, 1989 and July 25th, 1989, please be informed that the water condition of both my basement and to my back yard has worsened even with the installation of the new silt fence which runs parallel to my basement at 61 Evergreen Avenue.

I have enclosed four (4) photographs which are labeled #1-#4 inclusive which clearly show the mud and water coming from the adjacent construction. This condition never existed in the past. Please note that the North wall (picture #4 is almost completely dry. The photos were taken on August 12th.

The effects are causing an unsanitary condition to my house.

Your immediate attention to this matter is requested.

Thank you for your cooperation in this matter!

Very truly yours,

Sophia Christodoulou

Re: New Construction - 61 Evergreen Avenue

Dear Mr. Flicker,

Thank you for your response to my letter of July 25th, 1989 with reference to my property's ensuing water problems.

Please take note that your letter does not address my house's basement which also has been affected.

I think it would be advisable to inspect the conditions while it is wet or raining.

I can usually be reached and available with reasonable notice.

Thank you for your understanding and cooperation in this matter.

My home telephone number is 356-5329.

Sincerely,

Sophia Christodoulou.

Re: New Construction - 61 Evergreen Avenue

Dear Mrs. Christodoulou:

I have received your correspondence with respect to the water problem occurring in your rear yard as a result of the construction at 61 Evergreen Avenue.

Please be advised that this information is being forwarded to both the Department of Code Enforcement and the Township Engineer for review.

I can assure you that action will be taken in order to resolve this situation and if I can be of any further assistance please feel free to contact me.

### NOTES

- Oliver will secure and pay for all permits
- All work to be performed in a neat and professional manner by Oliver skilled technicians. Sweeping will be accomplished at the conclusion of each day.
- Guaranteed cleanliness and removal of all refuse.
- Drop cloths and shoe covers will be used to protect floors and furnishings.
- Changes to electrical or flue systems are not included except as noted.
- Owner approves installation of lawn sign.
- Air duct cleaning recommended prior to oil to gas hot air conversions and gravity to forced air conversions.
- Refrigerant handled as required by Clean Air Act.
- Existing equipment will be removed and recycled.
- All work done in accordance with existing codes.
- TO PROTECT ALL CONCERNED, if asbestos, mold or any other environmental hazard is encountered during the installation, we will promptly bring the matter to your attention. Our proposal does not include any cost involved with asbestos, mold or environmental hazards, unless specifically noted.
- We assume that the existing duct system is adequate. Any repairs, modifications, or additional work unless specifically noted will be in addition to the contract price.
- Advised customer to have chimney inspected by professional chimney company.

### TOTAL INVESTMENT AND TERMS

START AND COMPLETION DATES  
is intended that the work covered by this contract will begin on or about \_\_\_\_\_ and that the work will be completed on or about \_\_\_\_\_. Please be aware that these dates are an approximation and may be affected, if therefore extended, by factors beyond the control of the contractor, including but not limited to weather conditions, material delays or shortages and your failure to pay contractor in accordance with the terms of this contract.
